

DRIVING SUPPLY CHAIN INNOVATION

NorthStar Digital Solutions Named a Top 100 Logistics & Supply Chain Tech Provider of 2026

For a third consecutive year, NorthStar Digital Solutions (NDS) has been proudly recognized as a Top 100 Logistics & Supply Technology Provider by Inbound Logistics. Chosen among hundreds of submissions, this honour highlights our achievements in delivering impactful technology and value to the North American supply chain industry.

NDS remains committed to driving efficiency and performance for carriers, 3PLs and supply chain partners through advanced digital development. By integrating AI, robotics, machine learning, IoT, automation and other unified systems including Agentic AI using advanced API technologies, we empower organizations with real-time visibility.

Our ability to demonstrate our solutions in live operating settings has been instrumental to NDS' ongoing success. Through our DriveIT Innovation Lab, we leverage Polaris Transportation's fleet to test, validate and refine our technologies while giving customers the opportunity to experience them firsthand. FR8Focus, our custom-built mobile app developed in partnership with Radaro, has been widely recognized for improving visibility, accuracy and agility across LTL and truckload operations.

Polaris CTO and NDS COO, Dave Brajkovich, shares, "Operating within an asset-based environment allows us to engage directly with real-world challenges and deliver practical, results-driven solutions," adding, "We're grateful to Inbound Logistics for this continued recognition and to our valued partners and team of innovators who help us set new standards for supply chain technologies."
