

Award-Winning Innovators

NorthStar Digital Solutions Named a Top 100 Logistics & Supply Chain Technology Provider of 2025

NorthStar Digital Solutions (NDS) is proud to once again be selected among hundreds of companies as a Top 100 Logistics & Supply Chain Technology Provider by Inbound Logistics! Our status on this prestigious list highlights our achievements in introducing flexible, scalable digital solutions to the North American supply chain industry. Utilizing AI, robotics, machine learning, IoT and more, we are helping service providers and carriers streamline their operations, establish an ease of doing business and create cost efficiencies.

NDS provides carriers, 3PLs and supply chain partners optimized solutions featuring automated and unified systems. This leads to better customer service opportunities, advanced insights and most importantly, real-time visibility. With our digital creations, we solidify our customers' workflows by giving their teams the tools to effectively manage and identify required courses of action.

Our custom-designed mobile application FR8Focus, powered by Radaro, has been highly regarded by customers for bringing enhanced visibility, accuracy and agility to their LTL and truckload processes. We have continued to refine and enhance its cutting-edge features with the additions of Agentic AI and seamless SMART API integrations to backend TMS foundations.

As a Top 100 Logistics & Supply Chain Technology Provider, we are on a trajectory to make a difference for the supply chain providers that make our world turn. We are unique in the way we perform and execute strategies as we use-case harden them in-house. Hosted in our DriveIT Innovation Labs, we utilize Polaris Transportation's fleet to demonstrate, validate and vet our technologies and allow our customers to take them for a test drive in live environments.

Polaris CTO and NDS COO, Dave Brajkovich comments, "NDS is honoured to accept this recognition from Inbound Logistics. Our team has worked hard to brainstorm, create and deploy advanced technology within the transportation vertical," adding, "We take pride in being competitively positioned within an asset-based business landscape where we can engage with real-life challenges and find opportunities to drive real solutions to the end users."

We would like to thank all the hardworking innovators at NDS and our partners for helping us continue to push the limits of what's possible!
